

FACT SHEET

Flat Out International is the producer of the Multi-Reel and the Compact-Reel, as well as flat drink water hoses & flat sullage hoses. Multi-Reel and Compact-Reel have been designed for neat and compact storage. They are manufactured in Australia by qualified and experienced manufacturers, and they have a 3 year warranty.

MULTI-REEL

The Multi-Reel stores 40m of heavy duty power lead, 18m of flat drink water hose or 9m of flat sullage hose. The overall measurement of the Reel, including the handle, is 440mm. The diameter of the reel is 375mm, and the depth is 80mm.

COMPACT-REEL

The Compact-Reel stores 25m of power lead, 12m of flat drink water hose or 7m of flat sullage hose. The overall measurement of the Reel, including the handle, is 370mm. The diameter of the reel is 300mm, and the depth is 65mm.

FLAT DRINK WATER HOSE

Our drink water hose is a scaled down fire hose with a food grade liner, guaranteed non tainting, made from 100% polyester (no need to dry). It has a bursting pressure of 550psi, which is 7 times average tap pressure. These hoses are available in 12m and 18m lengths. Permanently attached is a 3/4 brass fitting of either end, along with a Snap Fitting and one 1" converter/reducer for the tap (Aust 2 tap sizes catered for). The hose has an internal diameter of 21 mm, which provides a high flow. Because the hose is a high pressure hose it is ideal for permanent connection to caravans and motorhomes using screw-on fittings. Various fittings are available through Flat Out International. Avoid driving over hoses. Sharp objects can puncture!

SULLAGE HOSE

Our unique flat sullage hose is made from PVC and has a memory providing a flat hose when stored on the Reel, and expanding for the disposal of your grey water when stored on the Reel. This hose has a 25mm internal diameter and comes supplied with two end plugs and a 25mm joiner. If you have a different size outlet you are allowed to plumb your own adaptation. We suggest taking it to the skirt of the van and finishing at a 45° angle – this is the easiest for connection. We also supply an elbow to go over the edge of drain pipe.

NEW PRODUCT RELEASE – larger Diameter Sullage Hose for faster drainage of grey water (designed for shower vans). This 9m hose has an internal diameter of 32mm! Like the 25mm diameter hose, this product stores flat on the reel, automatically expanding when taken off the reel. For more information please call us on 02 4472 2202.

PRICE LIST

| | | | |
|--|----------|--|----------|
| Multi-Reel | \$40.00 | Compact-Reel | \$40.00 |
| 18m Drinkwater hose & Multi-Reel | \$150.00 | 12m Drinkwater hose & Compact-Reel | \$110.00 |

HELPFUL HINTS

How to operate MULTI-REEL & COMPACT-REEL

- * To unwind: hold Reel by handle and pull product to retrieve. (Do not unwind by handle)
- * To wind: line up opening with rubber guides, place plug in centre, and press product through guides. Hold vertical by the carry handle or stand on its own feet and wind.
- * To wind drink water hose: place in a fluent line for easy disbursement of water. If the hose has been in use for some time, you will find that setting the Reel on its round feet will make it easier to wind the hose into the Reel.

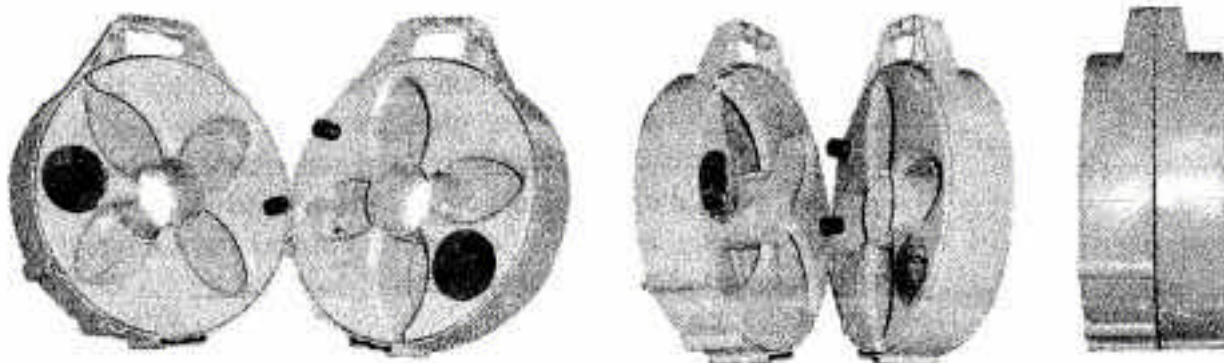

NOTE: All products must be fully unwound before use! Reel can go back into storage compartment while product is in use.

- * To store excess hose on connection while camping (eg when hose is longer than you need): place a nozzle on one end and close it, now add water pressure for the hose to expand. Then lay loose coils under van. Remove nozzle from hose end and now attach to vehicle. Add water pressure, or otherwise use as required. The hose also operates beautifully in cold climates.

- * The ideal way to attach drinkwater hose is with screw-on fittings: screw adaptor into van and then attach elbow so that it points down. Now screw hose to elbow. Your hose will hang neatly down the side of your van. (NOTE: we also stock adaptors to screw into American fittings). If you would like more information please call us on (02) 4472 2202

Storage of MULTI-REEL & COMPACT-REEL

Multi-Reels and Compact-Reels store face to face, so that each handle slips into the opening of the other. It is ideal for those who need every bit of space.
